BERTRAHOLIC
UNCOMPROMISED RESTOMOD

Preserving icons: engineering their next chapter

Classics deserve more than restoration

Bertraholic was created to protect the identity of **Classic Bertram Yachts** while making them **ready for the decades ahead**.

We preserve the lines, character and spirit that made these boats iconic, integrating **contemporary engineering**, carefully developed **components** and **bespoke refitting solutions**. Our purpose is not to reinvent the original. It is to ensure that it continues to perform, endure and inspire.

WHAT WE DO

Refitting & Restomod

Engineered Components

Custom Solutions

About Bertraholic

We restore, refine and elevate classic **Bertram Yachts** through a meticulous refitting and restomod approach that blends heritage with advanced engineering.

Our work extends from **complete structural and aesthetic restoration** to the **design and production of engineered components** and **bespoke solutions** developed around the specific needs of each boat.

Every intervention is conceived to preserve the identity of the original Bertram while improving performance, reliability and onboard experience. The result is not a replica of the past, but a more refined, capable and enduring expression of it.

BERTRAHOLIC

Uncompromised, by definition

Heritage: We respect the unmistakable proportions, identity and spirit of the original Bertram design.

Precision: Every line, component and technical decision is developed with attention to fit, function and long-term performance.

Engineering: We address each project as a complete system, combining specialist knowledge, advanced materials and purpose-built solutions.

Durability: We do not believe in temporary fixes. We create interventions designed to extend the life of each boat for decades to come.

A method built around the boat

No two **Classic Bertrams** are exactly alike. Decades of use, previous interventions and original hand-built construction make every project **unique.**

01 — Understand: We analyse its condition, history, geometry and the owner's objectives.

02 — Define: We develop a coherent project direction, balancing originality, performance, aesthetics and usability.

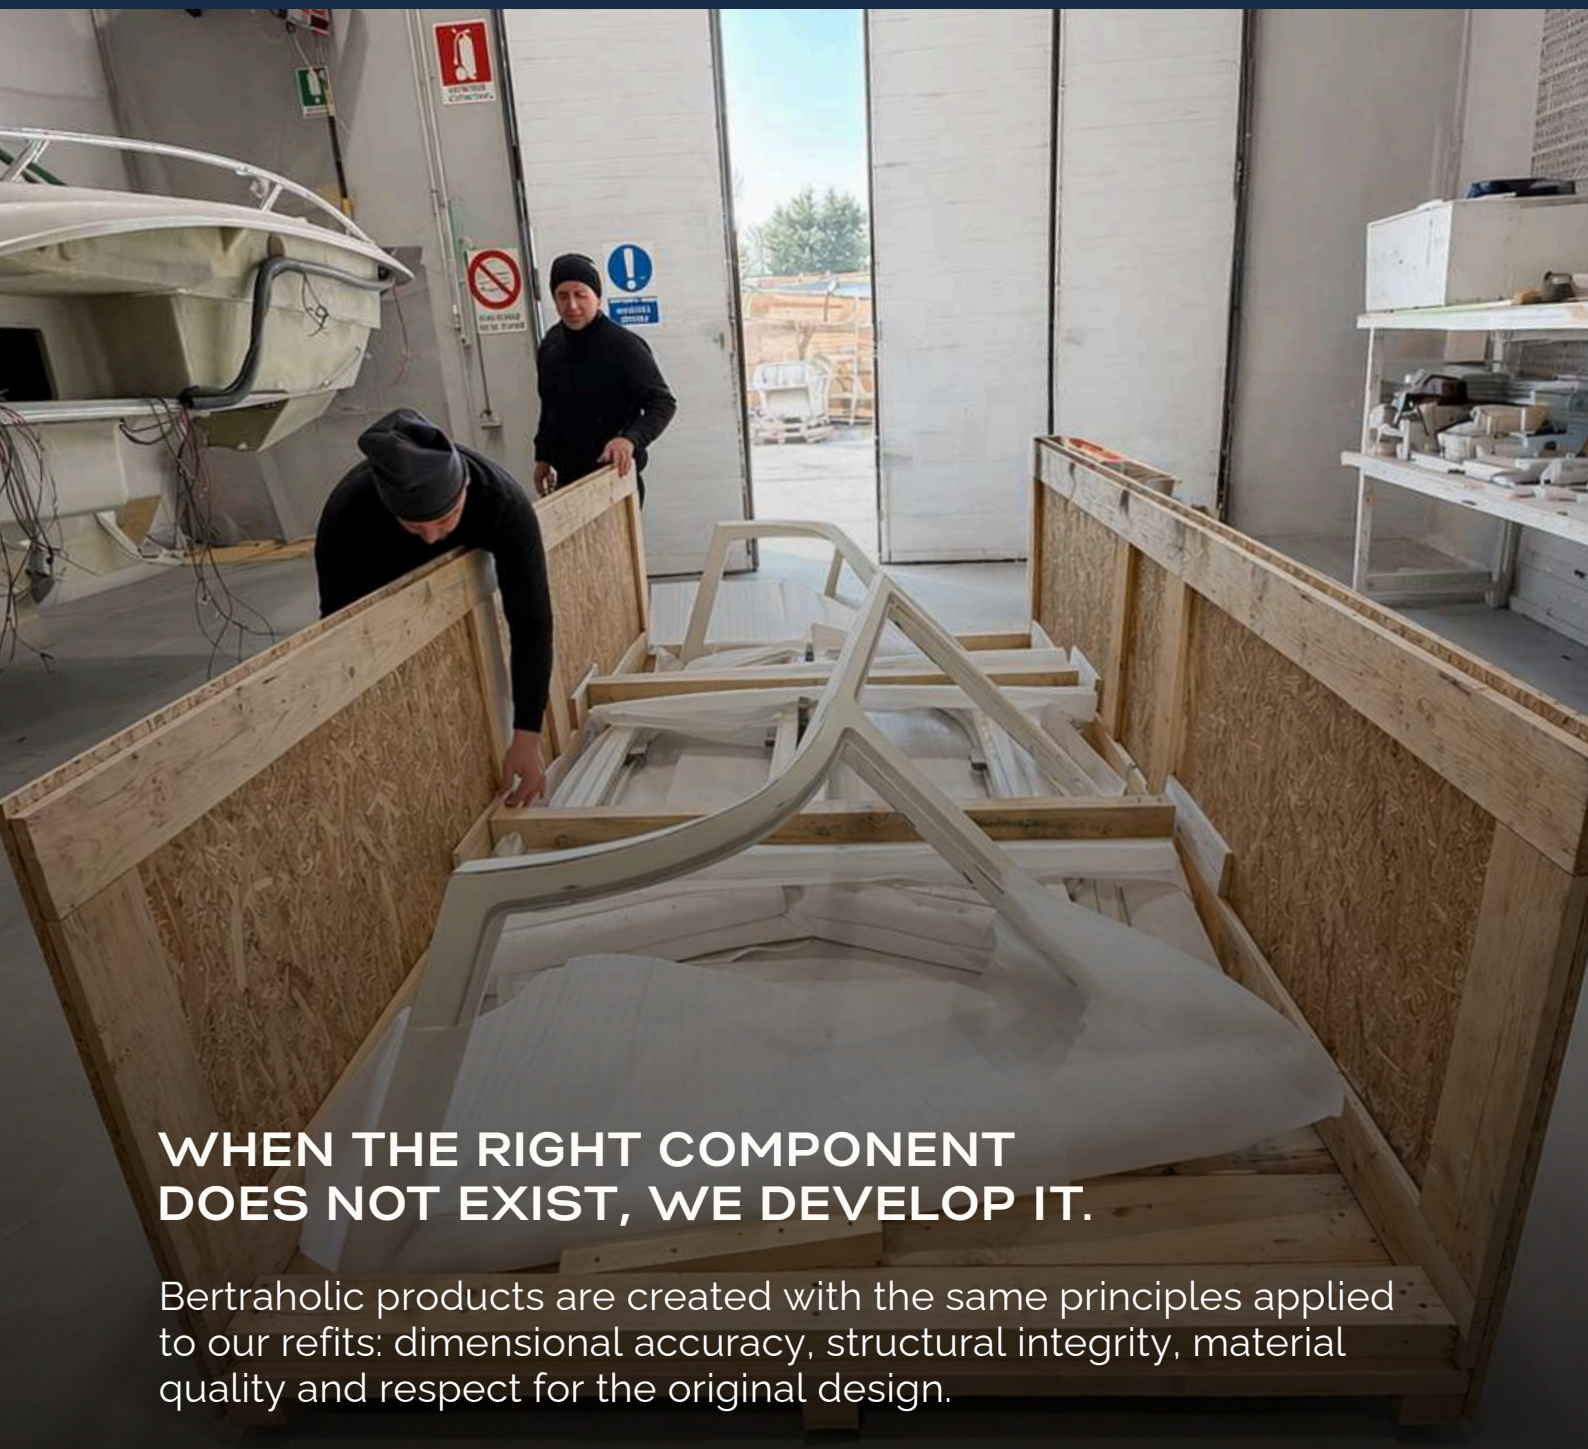

03 — Engineering: We design the required interventions, components and technical solutions with specialist partners.

04 — Execute: Each phase is carried out with precise coordination between craftsmanship, engineering and installation.

05 — Refine: We verify fit, finish and performance to ensure that every element belongs to the boat as a whole.

The experience developed through our restoration projects allows us to identify recurring problems for which the market offers no adequate solution.

WHEN THE RIGHT COMPONENT DOES NOT EXIST, WE DEVELOP IT.

Bertraholic products are created with the same principles applied to our refits: dimensional accuracy, structural integrity, material quality and respect for the original design.

Our **Window Frames Set for the Bertram 31** is one example of this approach: a complete engineered solution developed to resolve a long-standing structural and aesthetic problem without compromising the boat's original geometry.
